

Virtualizing the State of Connecticut

The State of Connecticut 's Department of Information (DOIT) Technology has taken an important first step toward server consolidation to save taxpayer dollars.

NSI was recently awarded a first of its kind contract to provide VMware virtualization software to the DOIT.

Specifically, the contract calls for VMware Virtual Infrastructure 4 CPU and Virtual Infrastructure Gold Support through NSI.

The DOIT is consolidating its servers with VMware as a possible first step toward server consolidation in other state departments.
