

## NSI Disaster Recovery Solution Health Care Organization Saves Money & Sleep

NSI has provided a high availability - disaster recovery solution to The Catholic Health Care System (CHCS) of New York.

CHCS was in need of a cost effective and instantaneous disaster recovery system connecting its seven health care centers in New York City and surrounding communities.

NSI Account Representative Henry Garcia worked closely with CHCS examining a variety of possible solutions, before CHCS purchased two IBM i5 520 Series servers (one High Availability) and iTera high availability software.

"For more than a year we discussed review, they realized this was the right solution for them."

Garcia estimates that CHCS saved \$60-thousand compared to the cost of its old disaster recovery system.

"Not only has CHCS saved money, but in the event there's a problem, they can fall back into the recovery system immediately without any interruption to their operations," Garcia said.
