

Turning Stone Resort & Casino Verona, NY

The Turning Stone Resort Casino represents a perfect example of NSI's technological acumen and ability to meet the unique requirements of gaming and hospitality facilities.

Saddled with an antiquated system (pre NSI) Turning Stone needed a significant upgrade to ensure zero downtime for its most critical operations. After extensive analytical work NSI designed a high availability solution that addressed hardware, software, storage, networking, back-up and recovery at multiple locations. NSI technicians then assisted with the installation. Today IT managers at Turning Stone can rest easy knowing NSI has given them true business continuity.

Along with providing a wide variety of consulting services, as well as hardware and software products, staff augmentation is another service utilized by Turning Stone for its Help Desk (peak times, vacation relief, sick leave, etc.).

Turning Stone has also benefited from NSI's strong business partner relationships. In more than one case NSI has leveraged its influence with a major IT supplier to secure additional resources and upgrades for the casino.
